1. Name - Smeet D. Parmar
2. Course - B.Sc. IT [F2]
3. Enrollment No. - 190802081
4. Roll No. - 39
5. Sem - 6 th
6. Project Id - UDPROM077
7. Year - 2019 - 2022

About

I have seen many that they feel bored and are fed up eating the same food item with same ingredients and taste . Because of which they also start hating the food. I was too suffering from the same !!!!!!

To overcome these problem I thought of making online food store wherein user can customize food items as per his choice . As a result , I started developing Millennium - The Customized Food Store . Where user satisfaction is at center and you can buy food items at very reasonable cost here.

Not only these but consumer also gets more satisfaction when makes or prepares its own customized food item . Also many times a consumer gets fed up of eating a food item with regular or pre - defined ingredients. So to make this change I have thought of making site Millennium - The Customized Food Store.

Acknowledgement

I would like to thank all those individuals who have helped me throughout the project. Those include all my close friends , classmates , cousins , teachers , roomates , google , youtube , etc . I am also thankful to online media like Google , You Tube , etc to give me all neccessary information required at the time of errors in my program . Apart from that I would also say a great thanks to all those sites like javatpoint.com , bootstrap.com , w3schools.com , tutorialspoint.com , etc.

A special acknowledgement goes to my ma'am . They taught me every single parts of my project i.e. every single query , database related storage mechanism , PHP short - cuts , small important and useful snippets ,etc . Also ma'am was available everytime whenever I needed their help when I have problems or errors in my code. Thanks ma'am for everythyng .

In addition to that I would also like to thank grocci site for giving me such a beautiful theme or rather templated for my website. It was best fitted templated I have every searched on google for.50% of my work i.e. designing was done with help of ready made template , I just have to copy paste it . Because of this I can concentrate and give time of my backend technology PHP and do programming in that .

2. *RAM* : 2GB or more
3. SQL Server
4. *Web Browser* :- Chrome , Firefox , Edge , Internet Explorer
5. Windows 7 or above
6. LCD Monitor

Use Case Diagram

- Use case diagrams show application use cases, actors, and the relationships between them. The relationships between actors and application use cases state that an actor can use a certain functionality of the application. You will not find any information about how or in what chronological sequence these services are rendered.
- An actor represents a role that an outsider takes on when interacting with the application. For instance, an actor can be a customer, a business partner, a supplier, or another business system.

- Actors: The users that interact with a system. An actor can be a person, an organization, or an outside system that interacts with your application or system. They must be external objects that produce or consume data.
- System: A specific sequence of actions and interactions between actors and the system. A system may also be referred to as a scenario.
- Goals: The end result of most use cases. A successful diagram should describe the activities and variants used to reach the goal.

Activity Diagram

- **Admin Side :-**

- **Client Side :-**

System Development LifeCycle

- The Software Development Life Cycle (SDLC) is a structured process that enables the production of high-quality, low-cost software, in the shortest possible production time. The goal of the SDLC is to produce superior software that meets and exceeds all customer expectations and demands.
- SDLC or the Software Development Life Cycle is a process that produces software with the highest quality and lowest cost in the shortest time possible. SDLC provides a well-structured flow of phases that help an organization to quickly produce high-quality software which is well-tested and ready for production use .

Now Don't Eat Pre-Defined Dishes , Make Your Own New Dish !!!!

My Vision

I have seen many people that they are not happy with ready made or pre-defined recepies and ingredients in a dish , to overcome that I have made this "Customizable Food Store" , in which user can customize each ingredients of his choice and make his own dish and get the best experience.

My Goal

My goal is to make this "Customizable Store" so huge that every consumer in Rajkot is happy with its own make customizable dish and enjoy it , now you all, need to regret yourself about pre-defined ingredients and also you will get everytime a good QUALITY OF FOOD.

What We Provide?

Variety Of Customizations

A good variety of customizations are available on each and every the products due to which consumer can make dish of his choice without any worries and enjoy that experience.

100% Satisfaction Guarantee

We gurantee 100% satisfaction as , consumer satisfaction is at top priority for us we make sure that consumer is totally with quality and taste of our products.

Free & Fast Delivery

We have many outlets in each cities and we are also planning to make more outlets so that food item reaches to consumer in fastest way with no cost.

1. HTML :-

- HTML stands for Hyper Text Markup Language .
- HTML is the standard markup language for creating Web pages .
- HTML describes the structure of a Web page .
- HTML consists of a series of elements .
- HTML elements tell the browser how to display the content .
- HTML elements label pieces of content such as "this is a heading", "this is a paragraph", "this is a link", etc..
- Syntax : <tagname> Content goes here... </tagname>.

2 . CSS :-

- CSS stands for Cascading Style Sheets .
- CSS describes how HTML elements are to be displayed on screen, paper, or in other media .
- CSS saves a lot of work. It can control the layout of multiple web pages all at once .
- External stylesheets are stored in CSS files .
- There are 3 types of CSS :-
 1. Inline CSS
 2. Internal CSS
 3. External CSS

3 . JavaScript :-

- JavaScript is a scripting or programming language that allows you to implement complex features on web pages — every time a web page does more than just sit there and display static information for you to look at — displaying timely content updates, interactive maps, animated 2D/3D graphics, scrolling video jukeboxes, etc. — you can bet that JavaScript is probably involved.
- It is the third layer of the layer cake of standard web technologies, two of which (HTML and CSS) we have covered in much more detail in other parts of the Learning Area.

4. BootStrap :-

- Originally created by a designer and a developer at Twitter, Bootstrap has become one of the most popular front-end frameworks and open source projects in the world.
- Bootstrap is a free front-end framework for faster and easier web development .
- Bootstrap includes HTML and CSS based design templates for typography, forms, buttons, tables, navigation, modals image carousels and many other, as well as optional JavaScript plugins .
- Bootstrap also gives you the ability to easily create responsive designs.

5. PHP :-

- PHP is an acronym for "PHP: Hypertext Preprocessor" .
- PHP is a widely-used, open source scripting language .
- PHP scripts are executed on the server.
- PHP is free to download and use .
- What can php do?
 - PHP can generate dynamic page content .
 - PHP can create, open, read, write, delete, and close files on the server .
 - PHP can collect form data .
 - PHP can send and receive cookies .
 - PHP can add, delete, modify data in your database .
 - PHP can be used to control user-access .
 - PHP can encrypt data .

6. MySQL :-

- MySQL is a relational database management system .
- MySQL is open-source .
- MySQL is free .
- MySQL is ideal for both small and large applications .
- MySQL is very fast, reliable, scalable, and easy to use .
- MySQL is cross-platform .
- MySQL is compliant with the ANSI SQL standard .
- MySQL was first released in 1995 .
- MySQL is developed, distributed, and supported by Oracle Corporation .
- MySQL is named after co-founder Monty Widenius's daughter: My .
